Ethnics and Computer Science
Hui Yu (Jessica) Du
Assignment: 02-app_review

Dear Families,

This year we will be using Repl.it, an online integrated development environment (IDE) for our Intro to Programming class. Repl.it allows users to write code, and build apps and websites using a browser. It allows users to share projects as well. Since our students are attending school remotely or on-site, Repl.it is a great tool for students to learn and collaborate virtually. For students to access Repl.it and all of it features, they will sign up for an account on Repl.it using their student email and create their own unique password.

Student's information such as first name, last name, email address, and all of their program files they create on Repl.it will be stored under the student's account. Log information such as IP addresses, browser type, Internet service provider, platform type, operating system, date and time stamp of access, and other similar information will be collected when you use or visit the site.

Repl.it shares information with its vendors to provide aspects of their services such as data storage and hosting, and payment processing. Their vendors help Repl.it collect and use Log information (mentioned previously).

If a User chooses to delete their account, their information will be deleted instantly from the active database. User's information will be stored for up to 60 days in their archives.

The End User License Agreement (EULA) is written in layman's terms and easily understandable. Please feel free to review their EULA.

Since Repl.it is in compliance with FERPA, I am recommending our students to use Repl.it for our class.

Best,
Ms. Du
